

CedarISP

Privacy Policy

PRIVACY POLICY

EFFECTIVE DATE

May 27, 2026

Application Name	CedarISP
Owner / Developer	Jawad Deeb
Contact Email	Jawaddeeb08@gmail.com
Governing Location	Beirut, Lebanon
Document Date	May 27, 2026

1. Introduction

This Privacy Policy explains how CedarISP collects, stores, uses, and protects information when the CedarISP desktop application is installed, accessed, or used.

CedarISP is a desktop software application designed for Internet Service Provider business management. It includes features for subscriber management, invoices, payments, wallet balances, cash drawer records, POS operations, employees, permissions, activity logs, local backups, network mapping, prepared WhatsApp messages, and license validation.

CedarISP is intended for business and professional use only. By installing or using CedarISP, you agree to this Privacy Policy.

2. Who Controls the Data

The business or person using CedarISP is responsible for the business data entered into the application. This includes subscriber data, customer data, employee data, invoices, payments, POS records, drawer records, network map information, exports, backups, and any other local business records.

Jawad Deeb does not control, monitor, or access the local database stored on the client's computer, except where the client voluntarily provides access during support.

Jawad Deeb only processes limited license validation and support-related information as described in this Privacy Policy.

3. Local Data Stored by CedarISP

CedarISP stores most application data locally on the client's computer using a local database.

Local subscriber data may include subscriber ID, username, full name, PPPoE password or connection password, mobile number, address, region, building, notes, service plan, reseller, collector, switch name, MAC address, nationality, latitude and longitude, price, balance, quota information, expiry date, blocked status, account status, role, archive or delete status, delete reason, company/provider link, and created or updated timestamps.

Local POS customer data may include customer name, phone number, email if entered, purchase history, unpaid balance, POS invoices, and payment records.

Local employee data may include employee username, password hash, role, permissions, activity records, and actions performed inside the application. CedarISP is designed not to store employee passwords in plain text.

Local financial and business data may include invoices, payments, wallet transactions, cash drawer transactions, POS sales, POS refunds, POS stock records, service plans, companies/providers, reports, and activity logs.

Local map and network data may include subscriber coordinates, stations, fiber boxes, network map markers, and default map location settings.

4. License Validation Data

CedarISP validates the license online on each login. During license validation, CedarISP may contact a private license validation system controlled by the developer.

License validation may send and store limited information, including login or validation time, license name, client name or license identifier, public IP address, validation result such as successful or failed login/license status, and basic request or security metadata required for validation.

This data is used for license validation, license enforcement, fraud prevention, abuse detection, security monitoring, support, and preventing unauthorized or cracked use of CedarISP.

License validation is required for using CedarISP. If the license cannot be validated, access to the application may be blocked.

5. Public IP Address

CedarISP collects the public IP address used during license validation.

The public IP address is collected because it helps verify license activity, detect abuse, protect the license system, and support clients.

The public IP address is not used to access the client's local database.

6. License Log Retention

License validation logs may be kept for as long as reasonably necessary for license enforcement, fraud prevention, abuse detection, security, troubleshooting, support, legal protection, and business records.

Where possible, license logs may be deleted, replaced, minimized, or overwritten when they are no longer needed.

7. No Access to Local Client Database

Jawad Deeb does not automatically receive, upload, copy, or access the local CedarISP database stored on the client's computer.

The client's subscriber data, invoices, payments, POS records, employee records, and local business data remain on the client's device unless the client chooses to export, share, transfer, back up, or provide them for support.

8. Support Access

Standard support is provided Monday to Friday, 10:00 AM to 4:00 PM Lebanon time, excluding holidays and unavailable periods.

For sensitive or urgent cases, support may be provided outside normal working hours. Emergency or after-hours support may require an additional fee.

Remote support may be provided only when the client voluntarily grants access, such as through remote desktop software, screen sharing, file sharing, or direct communication.

If the client shares files, database copies, screenshots, exported files, or remote access, the client is responsible for ensuring they are authorized to share that information.

9. Local Backups

CedarISP may create automatic local backups on application startup. Backups are stored locally on the client's computer. The application may keep backups for approximately the last seven days.

Backup files may contain sensitive business, subscriber, customer, employee, payment, POS, and financial information.

The client is responsible for protecting, copying, deleting, securing, and restoring local backup files.

10. Data Exports

CedarISP may allow import and export of data, including Excel files or other business files.

Exported files may contain sensitive personal, financial, subscriber, employee, POS, or business information.

Once data is exported from CedarISP, the client is fully responsible for storing, sending, protecting, deleting, or sharing that exported data.

11. WhatsApp Messages

CedarISP may prepare WhatsApp messages and redirect the client to WhatsApp or a WhatsApp-related service.

CedarISP does not send bulk WhatsApp spam and does not store sent message history unless such functionality is separately added or configured.

The client is responsible for the content of all messages, recipient consent, communication rules, WhatsApp terms, and applicable laws.

12. Payment and Financial Data

CedarISP does not process online card payments. The app records cash and manual payment methods entered by the client or their employees.

CedarISP may support multiple currencies, including United States Dollars and Lebanese Pounds.

CedarISP does not intentionally store credit card numbers, bank card details, or online banking credentials.

The client is responsible for verifying all financial, accounting, tax, invoice, cash drawer, POS, refund, and business records.

13. Third-Party Services

CedarISP may use or interact with third-party services, including a private license validation system controlled by the developer, hosting or infrastructure providers used for license validation, GitHub or website hosting used for software download, map-related services such as OpenStreetMap, WhatsApp or WhatsApp-related services when the client uses message preparation/redirect features, and remote support tools when voluntarily used by the client.

Third-party services are governed by their own privacy policies and terms. Jawad Deeb is not responsible for third-party service availability, policies, security, restrictions, or actions.

14. Security

CedarISP uses reasonable technical measures, such as local database storage and password hashing. However, no software or storage system can be guaranteed to be completely secure.

The client is responsible for protecting the computer where CedarISP is installed, using strong device passwords, using strong CedarISP employee passwords, restricting employee permissions, protecting the local database, protecting backup files, protecting exported files, using antivirus and device security tools, preventing malware and unauthorized access, and keeping the operating system secure.

Jawad Deeb is not responsible for data loss, unauthorized access, or misuse caused by weak passwords, compromised devices, malware, employee misuse, deleted files, lost backups, exported files, shared computers, or client negligence.

15. Data Deletion

Because most CedarISP data is stored locally on the client's computer, the client is responsible for deleting or managing local data.

Uninstalling CedarISP may not automatically delete all databases, backups, exports, configuration files, or related local files. The client should manually verify and delete remaining files if they want to remove all local data.

Some CedarISP records may be archived or protected from deletion for business integrity, audit, financial accuracy, or security reasons.

16. Client Responsibilities

The client is responsible for obtaining any legally required consent from subscribers, customers, and employees; entering accurate data; securing devices and backups; managing employee access and permissions; complying with privacy, telecom, employment, accounting, tax, and business laws; handling subscriber/customer privacy requests; protecting exported data; and verifying financial and invoice records.

17. Privacy Requests

For local business data stored inside CedarISP, subscribers, customers, and employees should contact the business that operates CedarISP. Jawad Deeb does not normally have access to the local business database.

For license-related data, clients may contact Jawaddeeb08@gmail.com.

Requests may be refused, limited, or delayed where retention is necessary for license enforcement, fraud prevention, security, support, accounting, legal compliance, dispute resolution, or protection of rights.

18. Children's Data

CedarISP is intended for business and professional use only. CedarISP is not intended for use by children.

Clients should not enter children's personal information unless they have a lawful reason and any required consent.

19. Changes to This Privacy Policy

This Privacy Policy may be updated from time to time. The updated version will apply from the effective date shown above or from the date it is made available.

Continued use of CedarISP after an update means acceptance of the updated Privacy Policy.

20. Contact

For privacy questions related to CedarISP license validation or support, contact Jawad Deeb at Jawaddeeb08@gmail.com.

Acknowledgment

By installing, activating, accessing, or using CedarISP, the client confirms that they have read, understood, and agreed to this document.
